

SYSTEM AND METHOD FOR PRUNING AN ARTICLE

ABSTRACT OF THE DISCLOSURE

A system and a method are provided for pruning an article to fit in an allocated
5 space of a publication. In one embodiment, the system includes a processor circuit
having a processor and a memory with article pruning logic stored on the memory and
executable by the processor. The article pruning logic comprises logic to
automatically reduce a length of an original article to fit within a predefined space
allocation of a publication. This may be accomplished by executing logic to create a
10 pruning copy of the original article to be reduced, logic to remove an amount of
content from the pruning copy, and logic to compare a pruned content of the pruning
copy with a content of the original article to determine an informational adequacy of
the pruned content.
